

GEOGRAPHIC INFORMATION SYSTEMS SERVICES

GIS:

We specialize in GIS mapping services across various sectors, offering customized maps that meet industry standards and cater to the specific needs of clients - ensuring accuracy in digital mapping solutions

3D MAPPING:

Geospatial image applications. We provide 3D model generation, interpretation, measurement, and visualization of stereo imagery to derive 3D information. Generation of DTM, DSM, and DEM

LIDAR:

Our expertise lies in providing Lidar services, which encompass the processing of Lidar data to craft detailed digital terrain models, digital surface models, and digital elevation models tailored to meet specific requirements
